The **PROTECT A LIFT™** Unit is Specifically Designed to
Eliminate Destructive Galvanic Corrosion
and Premature Zinc Loss on Your Boat and Boat Lift.

Through its state-of-the-art technology, the **PROTECT A LIFT™/ PROTECT A BOAT** System will eliminate the galvanic corrosion that is present any time your boat shore-power or boat lift is connected directly to your home's electricity. While maintaining the critical safety connection to ground, the PAL unit will eliminate any "stray" current that can be present in your shore power ground. The result: corrosion protection of your lift structure and both your lift and boat's costly zincs and maintains the AC safety ground.

Simply stated, the PAL will eliminate the need for a plug or disconnect switch to be installed in your boat lift's in-coming power supply line. When installed on a shore power supply, the PAL will protect your boat zincs from rapid loss.

About the size of a wallet (4"x 3" x 2" thick), never before has such a compact water-proof device been available with a rated capacity of 50 amps continuous.

Suggested Price \$399.95
